The WWF, renowned global nature conservancy brand, greenwashes the ecological crimes of corporations

currently destroying the last remaining rainforests and natural habitats on earth; and it accepts their money. This business model of the famous “eco” organization does more to harm nature than to protect it. The WWF cannot refute the facts gathered by esteemed journalist and filmmaker Wilfried Huismann during his two-year research expedition to all corners of the green empire. A journalistic tour de force unearthing the grim secrets behind the warm and cuddly façade of the WWF, Huismann’s exposé went straight to the German bestseller list. The book is now available in English, unabridged and updated. Huismann also dug deep into the early history of the world’s most powerful nature conservancy organization and found several skeletons in the closet: the elite secret club known as “The 1001”

and a private military commando unit deployed in Africa against big game poachers – and against black African liberation movements. In the name of environmental protection the WWF has participated in the displacement and cultural extinction of indigenous peoples the world over.

The manufacturing of Greta Thunberg - for consent: the political economy of the non-profit industrial complex We are introduced to the not-so accidental phenomena of Greta Thunberg, the current child prodigy and face of the youth climate change movement. The "climate change is real" message is reframed for public consumption and rolled out at an international level, using Greta and her global platform to "sound the alarm" on climate change. This climate emergency is likened to a

"house on fire", while urging the public to be serious, patriotic, empathetic and, of course, nonviolent. Not one sentence of the new strategy mentions the horrific impact militarism has on climate change. The New Climate Economy being pushed by groups like Extinction Rebellion merely repackage our oppression into emergency mode. This urgency becomes global so that governments, NGOs and corporations will all direct immediate funding towards unlocking trillions of capital needed to save capitalism by further funding the new green imperialism. Today's youth are used and molded into market solutions to insulate a global elite. Celebrity-sponsored activism seeks to build a new industry in which NGOs, the media and corporate powers collude to get people to support the very industries we

should be erasing from the planet. The planet's most powerful capitalists lie behind these "youth-led" movements for climate change, helping to manufacture consent for the "fourth industrial revolution" in an attempt to quell resistance to industrial civilisation.

The Big Conservation Lie' is a wake up call focused on a field that has been 'front and centre' of many people's hearts and minds in recent years; The conservation of Africa's wildlife. It is a pursuit whose power to inspire is only rivalled by it's ability to blind it's audience to reality. This book takes the reader through Kenya's conservation 'industry' and the players therein with all their prejudices, weaknesses and commitment to causes, many of which are

indistinguishable from their personalities. It is a call to indigenous Africans to claim their place at the table where the management of their natural resources is being discussed and invites well-meaning donors to look beyond the romantic images and detect the possible role of their money in the disenfranchisement of a people.

A look at the top 300 most powerful players in world capitalism, who are at the controls of our economic future. Who holds the purse strings to the majority of the world's wealth? There is a new global elite at the controls of our economic future, and here former Project Censored director and media monitoring sociologist Peter Phillips unveils for the general reader just who these players are. The book includes such power players as Mark

Zuckerberg, Bill Gates, Jeff Bezos, Jamie Dimon, and Warren Buffett. As the number of men with as much wealth as half the world fell from sixty-two to just eight between January 2016 and January 2017, according to Oxfam International, fewer than 200 super-connected asset managers at only 17 asset management firms—each with well over a trillion dollars in assets under management—now represent the financial core of the world's transnational capitalist class. Members of the global power elite are the management—the facilitators—of world capitalism, the firewall protecting the capital investment, growth, and debt collection that keeps the status quo from changing. Each chapter in *Giants* identifies by name the members of this international club of multi-millionaires, their 17 global financial

companies—and including NGOs such as the Group of Thirty and the Trilateral Commission—and their transnational military protectors, so the reader, for the first time anywhere, can identify who constitutes this network of influence, where the wealth is concentrated, how it suppresses social movements, and how it can be redistributed for maximum systemic change.

The concept of sustainability lies at the core of the challenge of environment and development, and the way governments, business and environmental groups respond to it. Green Development provides a clear and coherent analysis of sustainable development in both theory and practice. Green Development explores the origins and evolution of

mainstream thinking about sustainable development and offers a critique of the ideas behind them. It draws a link between theory and practice by discussing the nature of the environmental degradation and the impacts of development. It argues that, ultimately, 'green' development has to be about political economy, about the distribution of power, and not about environmental quality. Its focus is strongly on the developing world. The fourth edition retains the broad structure of previous editions, but has been updated to reflect advances in ideas and changes in international policy. Greater attention has been given to the political ecology of development, market-based and neoliberal environmentalism, and degrowth. This fully revised edition discusses: the origins of thinking about

sustainability and sustainable development, and its evolution to the present day; the ideas that dominate mainstream sustainable development (including natural capital, the green economy, market environmentalism and ecological modernisation); critiques of mainstream ideas and of neoliberal framings of sustainability, and alternative ideas about sustainability that challenge 'business as usual' thinking, such as arguments about limits to growth and calls for degrowth; the dilemmas of sustainability in the context of forests, desertification, food and farming, biodiversity conservation and dam construction; the challenge of policy choices about sustainability, particularly between reformist and radical responses to the contemporary global dilemmas. Green Development

offers clear insights into the challenges of environmental sustainability, and social and economic development. It is unique in offering a synthesis of theoretical ideas on sustainability and in its coverage of the extensive literature on environment and development around the world. The book has proved its value to generations of students as an authoritative, thought-provoking and readable guide to the field of sustainable development.

"Costly Fix addresses core questions about the Alberta oil sands boom that started in the 1990s: Why did this flood of investment pour into the oil sands of northern Alberta? What role has government played with respect to the oil sands rush, and why? Who benefited and who or what has paid

the costs of exploiting the oil sands? By analyzing the interest, ideas, and institutions involved in the oil sands boom, Ian Urquart charts its development from the beginning to the present. In this process, we learn about the state's role in making the oil sands profitable, the environmental dimensions of oil sands development, and First Nations' roles in both opposing and supporting the industry. The final chapter examines the extent to which Alberta's new NDP government, in its first eighteen months, altered the legacies they inherited from the Progressive Conservatives on royalties, tailings reservoirs, and climate change."--

The Africa-wide Great Elephant

Census of 2016 produced shocking findings: a decimated elephant population whose numbers were continuing to plummet. Elephants are killed, on average, every 15–20 minutes – a situation that will see the final demise of these intelligent, extraordinary animals in less than three decades. They are a species in crisis. This magnificent book offers chapters written by the most prominent people in the realm of conservation and wildlife, among them researchers, conservationists, film makers, criminologists, TV personalities and journalists. Photographs have been selected from among Africa's best wildlife photographers, and the Foreword is provided by Prince William. It is hoped this book will create awareness of the devastating loss of elephant lives in Africa and

stem the tide of poaching and hunting; that it will inspire the delegates to CITES to make informed decisions to ensure that all loopholes in the ivory trade are closed; and that countries receiving and using ivory (both legal and poached) – primarily China, Vietnam, Laos and Japan – ban and strenuously police its trade and use within their borders, actively pursuing and arresting syndicate leaders driving the cruel poaching tsunami. This book is also a tribute to the many people who work for the welfare of elephants, particularly those who risk their lives for wildlife each day, often for little or no pay – in particular the field rangers and the anti-poaching teams; and to the many communities around Africa that have elected to work with elephants and not against them. The Last Elephants – is the title prophetic?

We hope not, but the signs are worrying.

The development and use of genetically modified organisms (GMOs) has been a contentious topic for the last three decades. While there have been a number of social science analyses of the issues, this is the first book to assess the role of Non-Governmental Organizations (NGOs) in the debate at such a wide geographic scale. The various positions, for and against GMOs, particularly with regard to transgenic crops, articulated by NGOs in the debate are dissected, classified and juxtaposed to corresponding campaigns. These are discussed in the context of key conceptual paradigms, including nature fundamentalism and the organic

movement, post-colonialism, food sovereignty, anti-globalisation, sustainability and feminism. The book also analyses how NGOs interpret the debate and the persuasive communication tactics they use. This provides greater understanding of the complexity of negotiations in the debate and explains its specific features such as its global scope and difficulty in finding compromises. The author assesses the long-term interests of various participants and changes in perceptions of science and in public communication as a result. Examples of major NGOs such as Greenpeace, Oxfam and WWF are included, but the author also provides new research into the role of NGOs in Russia.

Including perspectives from multiple world regions, the book takes account of institutions in the Global South, alongside better-known structures of the Global North.
